WIRE COILER MACHINE

SOUTH FENCE WIRE COILER MACHINE

introduction

HIGH SPEED WIRE COILER MACHINE

The South Fence high speed Wire Coiler Machine is a product developed from the company's extensive experience of more than 70 years in the manufacture of wire products and machinery specifically designed and produced for the wire industry.

The vast experience gained over these years has enabled South Fence Machinery Ltd to identify and design requirements to facilitate the most economic and efficient manufacture of wire products.

The same dedication and exacting standards that have placed South Fence Machinery Ltd at the forefront of both Hinge Joint and Fixed Knot machine technology have been applied in the design and development of the Wire Coiler Machine.

As with all South Fence machines the wire coiler is constructed using the highest quality of materials and craftsmanship.

South Fence Machinery^{LTD}
ADVANCED WIRE FENCE TECHNOLOGY

design & construction

South Fence Machinery's Wire Coiler Machine is a fully integrated high production machine that can coil wire at 375 metres/1237.5 feet per minute and can produce coils up to 60kg/132.25lb in weight.

The machine lays the wire in a horizontal plane to ensure that when the coil is unwound that the wire flows off from the apex of the coil minimizing the risk of costly, time consuming wire tangles.

To ensure the most efficient production time South Fence have developed a dual coil collection system that allows the operator to tie off one coil while the machine produces a second coil.

An automated pneumatic cutter comes as standard equipment on the South Fence Wire Coiler and ensures a safe, accurate cut every coil.

The South Fence Wire Coiler incorporates a pneumatic system for removing the finished coil from the machine.

The machine has a comprehensive range of safety features including electric trip systems and guards that not only keep the operator safe, but also stop the machine automatically in the event of a wire breakage or tangle.

All of the above features come standard and are included in the price.

ISO 9001
Reg No 835

machine specifications & dimensions

| | |
|---|-----------------------------|
| Wire Size Range | 2.00mm to 4.00mm |
| Max Coil Weight | 60kg |
| Production Speed | up to 375 metres per minute |
| Machine Weight | 2000kg |
| Floor Space Required | 5.5m x 2.5m |
| Some variation to the above specification and design is available on request. | |
